

## Software Engineer BI - Specialist Tableau

P19-028

Start datum: Asap  
Locatie: Halle of Deinze  
Duurtijd: Lange termijn  
Profiel: Medior tot Senior (5 tot 10 jaar relevante ervaring) maar expert in Tableau

---

### DESCRIPTION

As SE BI, you are part of the BI department and you work in a team of Solution Analysts (SA BI) and Software Engineers (SE BI). You are in charge of the implementation of solutions regarding the information needs of our internal partners. For this, you work in close collaboration with the SA. You do the technical translation of the functional needs identified by the SA, take decisions and elaborate the most adequate BI solution.

Your primary work tool is Tableau.

As a reporting specialist, you provide support and advices to the business users on the reports made by you or by your colleagues.

Here are some examples of the requested tasks:

- Analyze the demand as described by the SA
- Build the solution using Tableau
- Implement, test and document the solution
- Ensure the promotion to our production environment
- Provide operational support as second line.

You will receive training and support to learn to know our guidelines and the way of working of Colruyt Group.

### PROFILE REQUIRED

- You have an analytical mindset and the eye for detail
- You can translate functional needs into technical implementation
- You can transform data into conclusion and present them in an intelligible way
- You can work in autonomy while keeping a team player mindset
- You are accurate in your job and can keep cool and efficient under pressure
- **Advanced knowledge Tableau**

- Experience in SAP BO is an asset
- You speak Dutch, English and French is an asset

#### **DETAILED TASK DESCRIPTION**

- Analyze the demand described by the solution analyst and think / participate to the reflexion on the reporting solution that should be implemented to meet the business needs.
- Develop the reporting solution with Tableau in the required timing with the adequate quality, following the Colruyt guidelines and standards
- Test, implement and document the developed solution
- Provide the adequate support on the developed solution
- Fix bugs in existing reporting solution when requested or provide support to do so
- Share expertise and experience with the other team members in order to reinforce our current Tableau expertise
- Participate to the different meetings and strategic initiatives as if you were a Colruyt Co-worker
- Report on your work and provide feedback and status, pro-actively communicate about risks/issues related to the tasks assigned to you (timing, feasibility, quality)
