

Uniface Analyst Developer P20 – 114

Start date: Asap
Location: Zaventem
Duration: Long term assignment

As one of the market leaders in our sector, we are execution various projects to confirm our position in the market, while we also modernize our IT landscape by implementing international applications and integrating with service providers.

We are looking for an all-round profile, who is strong on the functional side, but also capable of building technical solutions.

In this role, you will be responsible for building quality solutions when changing the main backoffice application (Atlas) or the integrating services. You will engage in projects from start to finish, where you will gather and validate requirements, analyze and design the solution and of course develop the programs and services.

This means strong analytical and design skills are required, together with development and (unit) testing capabilities. Any experience with other programming languages is a plus (C, java, ...).

Depending on the size of the project, you will work either independently or in close collaboration with other team members. Your specific role might differ based on the needs of the projects.

Tasks

- Gather, challenge and validate requirements.
- Analyze and design solutions, services, screens, components.
- Various development work, mainly uniface and sql
- Development in other languages (e.g. tIBCO iProcess, c and java)
- Create unit test and system tests
- Support for continuous integration and deployment
- Document your work
- Collaborate within project approach (v-model, scrum or hybrid).

Language requirements

English – good skill level required (oral and written)

Dutch – good skill level preferred (oral and written)

French - good skill level nice to have (oral and written)

Competence profile

- Requirements validation and analysis (gap analysis, story writing, estimation, ...)
- Solution design (process flows, db design, interaction diagrams, ...)
- Uniface 9.7 and 10 (Forms and uRouter)
- (Transact-) SQL
- Web Service and rest architecture knowledge
- Versioning tools (PCS, SVN and GIT)
- Scripting (general, mostly AIX-based)
- Sybase ASE 15.7
- OS knowledge of AIX, Linux, Windows
- Tibco iProcess workflow engine
- C (AIX-based / Windows based)
- Java
